PARTNER-TO-PARTNER · ON INSTITUTIONAL MEMORY

Every firm walking into a deal starts from zero unless someone has a vault. What junior analysts at the bulge banks call "a precedent search" is usually ten people Slack-ing for a redline that exists somewhere in someone's inbox. Our version: **1,847 indexed assets**, *every one tagged to a mandate, a vertical, a counterparty, and a clause. The Vault makes our first draft better than their fifth. It also makes* **agentic skills sharper** *— every deliverable an ACP skill produces references the Vault, so the firm improves every time a mandate closes. This is compound institutional capital: every deal adds another clause, another comp, another precedent. By FY29 the Vault will be the moat.*
